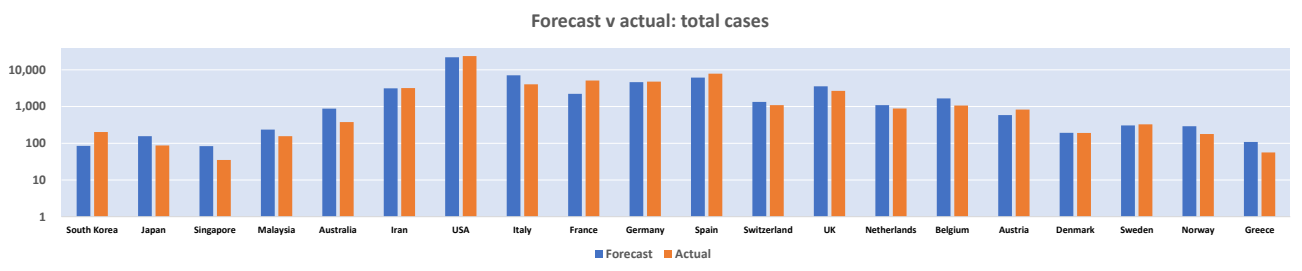
# COVID-19 - GLOBAL SUMMARY | 29th March, near midnight US East Coast time

## 1. Daily update on case numbers

Our short run forecast model assumes Western nations match the reduction in transmission rates achieved in Korea or Italy. From 19th March, we have begun taking data from the Johns Hopkins dashboard, causing a material jump in some countries case numbers that date.

**Key points**

1 USA tracking almost exactly as expected
2 Case numbers have edged up in Japan and Korea
3 Australia and Greece coming in lower than predicted

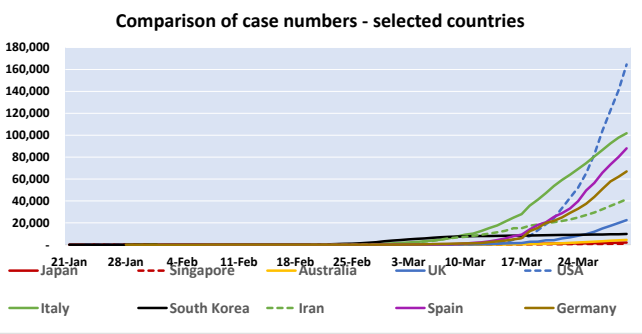


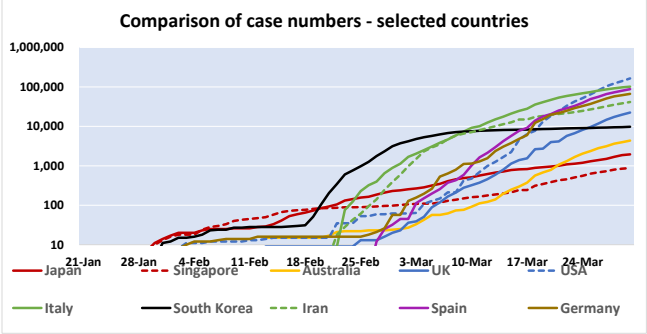
## 2. Global comparison of growth in case numbers

WHO data up to 18th March, then Johns Hopkins data. The left hand chart uses a normal axis and the right hand chart shows identical figures on a log axis.

**Key points**

1 Case numbers in USA expanding rapidly - may hit 250,000 cases by around 2nd April
2 Slowdown in Western countries has been nothing like as effectvie as achieved in Korea
3 Some evidence of slowdown in Australia, but impact of border breaches remains uncertain



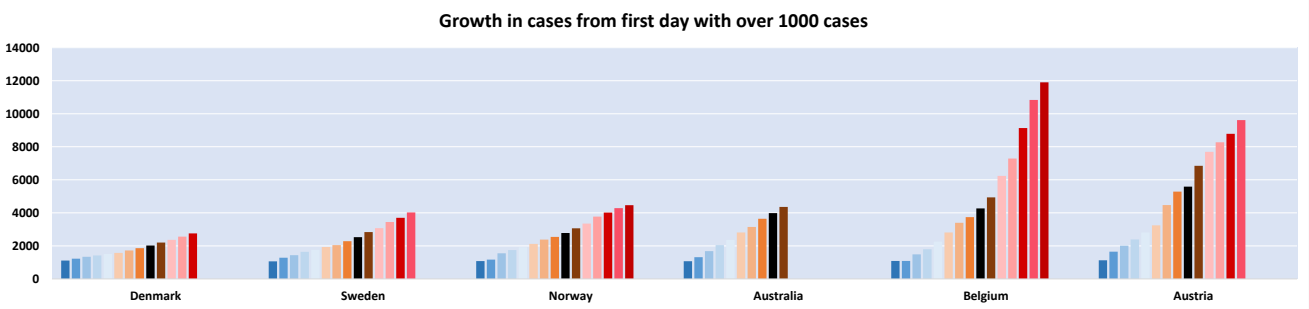


## 3. Spotling on Australia

WHO data up to 18th March, then Johns Hopkins data.

**Key points**

1 Denmark and Sweden show slower case growth
2 Case growth now slowing in Belgium
3 Australia is tracking most closely to Belgium - next few days are critical

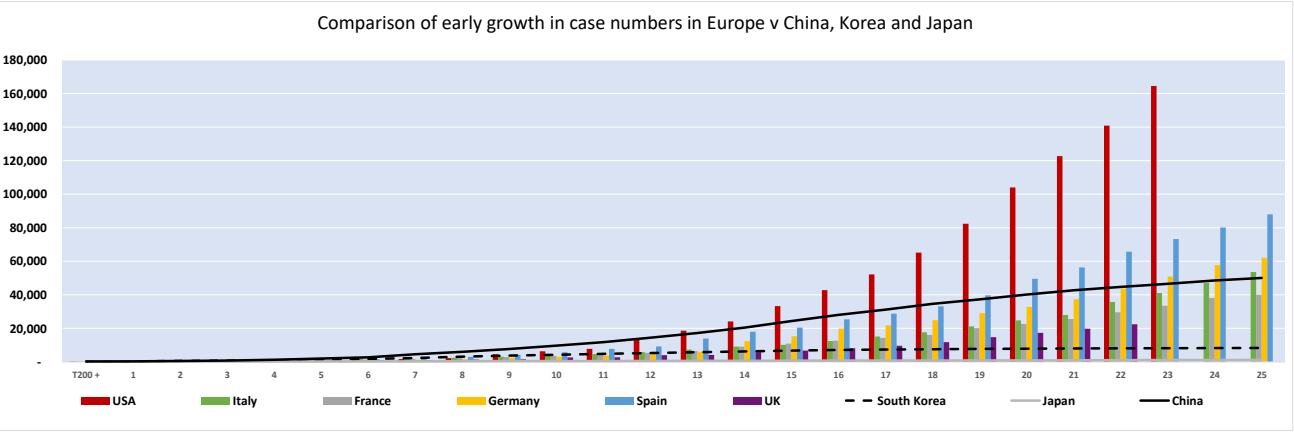


## 4. Comparison of early stages of outbreaks

The bars below show absolute case numbers, starting from the first day that the country reported approximately 200 cases. This allows comparison of the early stages of the outbreak against China (black line), South Korea (black dotted line) and Japan (grey line)

**Key points**

1 US outbreak now dwarfs China though growth may be beginning to slow slightly
2 Spain now tracking strongly ahead of China - case growth in Germany and Italy slowing
3 Many other countries beginning to see significant case numbers - UK beginning to explode



# Novel Coronavirus (2019-nCoV)
