

1. Development from c. 100 cases - selected countries

This chart shows case numbers starting from the first day with 100 cases or more (other than Switzerland where we have included 89 cases as the starting point as case numbers jumped to 209).

Key points

- 1 Continental Europe outbreaks have accelerated rapidly
- 2 Asian countries have shown materially slower early growth
- 3 Rapid early growth in Denmark is concerning - we are watching UK and USA closely too

2. Longer run outbreak development

This chart shows case numbers, again starting from the first day with 100+ cases. In addition to individual countries, we show France, Italy, Germany and Spain combined (aka "FIGS") to illustrate the severity of the outbreak in Europe.

Key points

- 1 The outbreak in Continental Europe is larger than China at the same point in outbreak development
- 2 Italy has not yet achieved the level of outbreak control delivered in South Korea
- 3 Japan continues to show remarkable success in controlling spread
